

PrintVana NFC Digital Business Card

Information Architecture & Mobile-First Flow — UX Documentation

Prepared as: UX Writing + Information Architecture specification **Platform:** Mobile-first responsive web (one URL, receiver + owner experiences) **Design system:** PrintEve Design System **Date:** 7 July 2026

Research inputs:

- Reference image: "EliteCard – Alexander Sterling" profile layout
- Live references: qlik.biz/universalbrew, qlik.biz/MehulGajjar (Opti Matrix), dzicard.com/dbc/kbg-boilers-pvt-ltd
- Industry scan: Uniqode, OVOU, Popl, HiHello, KADO, OmniFlow (India), businesscards.io
- lxDf mobile-first principles (see companion doc: *mobile-first-design-research*)

Part 1 — Who Is This Page For?

Every IA decision below follows from two people:

	The Receiver (tapped the card)	The Owner (bought the card)
Mindset	Microtasking — 10-second visit, someone is standing in front of them	Extended engagement — editing, tracking
Device	Always a phone	Phone mostly, desktop for deep editing
Primary job	Save this person's contact	Look impressive + capture the lead
Secondary jobs	Call / WhatsApp / see what they offer	Update info, see analytics
Network	Often poor (expo hall, street, basement office)	Usually stable

The one-sentence design contract:

A stranger with one thumb, weak 4G and five seconds of patience must be able to save the contact — everything else is progressive enhancement.

Part 2 — Complete Information Architecture

2.1 The Priority Pyramid (what loads and shows first)

P0	IDENTITY	Who is this?	(0-1 s, above the fold)
P1	ACTIONS	How do I reach them?	(thumb zone, no scroll)
P2	CREDIBILITY	Can I trust them?	(first scroll)
P3	OFFERINGS	What do they sell?	(second scroll)
P4	PROOF & MEDIA	Show me more	(deep scroll)
P5	EXCHANGE	Here are MY details	(persistent CTA)
P6	UTILITIES	Payments, files, legal	(bottom / on demand)

2.2 Full Content Inventory — every block, field by field

P0 · Identity Block (Hero)

Element	Content	Rules & UX notes
Cover banner	Brand image / gradient / video still	Decorative — must never delay text render. Lazy-load.
Profile photo	Face or logo, circular	2 fallbacks: initials avatar → brand mark. Never broken image.
Full name	"Gunjan Talsania"	Largest text on page (H1). Test 28+ character Indian names.
Designation + Company	"Founder, CEO · Khyati & Sons Enterprise"	One line, truncate gracefully.
Tagline (optional)	"Redefining digital networking"	Max 60 chars. Owner-written; we provide examples.
Verified badge (optional)	✓ PrintVana Verified	Trust marker; links to what verification means.
View counter (optional)	"👁 288 views"	Social proof seen on qlik.biz. Owner can toggle off.

P1 · Action Row (the money row — sticky/thumb-zone)

Action	Microcopy	Behavior
Save Contact	Save Contact	PRIMARY. Downloads .vcf with photo. The "Shazam button".
Call	Call	tel: — if 2 numbers, bottom-sheet chooser ("Office / Personal").
WhatsApp	WhatsApp	Pre-filled: "Hi {FirstName}, we just met — great connecting!"
Email	Email	mailto: with subject "Following up — {OwnerName}".
Website	Website	New tab.
Directions	Directions	Google Maps deep link.
Share	Share	Native share sheet → WhatsApp/SMS/Email/LinkedIn + Copy link.
QR	Show QR	Full-screen QR of this card (reverse-share when <i>their</i> phone taps ours).

Rule: max 4 visible + "More" overflow if owner enables >4. One tap each — no interstitials.

P2 · Credibility Block

Element	Content	Notes
About company	2 short paragraphs max	UX-writer trimmed; 2–3 sentences each (lxDf scanning rule).
About person (bio)	1 paragraph	Optional; "20 years leading teams across EMEA..."
Expertise tags	Strategy Leadership Innovation	Chips, max 6.
Legal identifiers	GSTIN, ISO cert, CIN	India-critical (both qlik.biz & dzicard show GSTIN/ISO). Copy-on-tap.
Social row	LinkedIn, Instagram, Facebook, YouTube, X, IndiaMART	Icons only, recognized patterns. Max 6, owner picks order.

P3 · Offerings Block

Element	Content	Notes
Section title	What we offer	Not "Exclusive Offerings" — plain language wins.
Service/product cards	Image + name + 1-line description	Card pattern (IxDF-recommended). Horizontal scroll on mobile, grid on desktop.
Category grouping	"Coffee / Tea / Cocoa"	Reference cards group SKUs under headers — support simple text lists too (SMB mode).
Card CTA	Enquire on WhatsApp	Pre-filled with product name: "Hi, I'm interested in {Product}".
Catalogue link	View full catalogue (PDF)	For businesses with long lists.
Search (only if >8 items)	Search services...	Progressive disclosure — hidden for small catalogues.

P4 • Proof & Media Block

Element	Content	Notes
Featured video	YouTube/hosted embed	Click-to-load poster only (never autoload — bandwidth).
Gallery	3–8 images	Lightbox; lazy-load.
Testimonials	Quote + name + role	1–3, carousel.
Resource center	Company profile PDF, brochures, price list	Show file size ("PDF · 4.2 MB") — users on mobile data deserve to know.
Google Review link	★ Rate us on Google	Huge for Indian SMBs — drives their local SEO.

P5 • Exchange Block (lead capture — OUR differentiator)

Element	Content	Notes
Floating CTA	Share your details	Appears after 40% scroll or 8 s. Never blocks content.
Form fields	Name, Phone, (Email), (Note)	2 required max. Autofill-friendly. This feeds the owner's lead inbox.
Consent line	"Your details go only to {OwnerName}."	Plain-language privacy = trust.
Success state	"Done! {FirstName} has your details."	+ optional "Save their contact too" nudge.

P6 • Utilities Block

Element	Content	Notes
Payments	UPI ID + QR, bank details, GPay/PhonePe/Paytm buttons	dzicard has "Payments"; OmniFlow leads with UPI — must-have for India. Copy-on-tap UPI ID.
Wallet pass	Add to Apple Wallet / Add to Google Wallet	Receiver keeps the card forever.
Appointment booking	Book a meeting	Calendly/Google Calendar link. Optional module.
Address block	Full postal address	Copy-on-tap + map link.
Multiple numbers/emails	Labeled: Office / Personal / Support	qlik.biz shows 2 numbers — support up to 3, labeled.
Language toggle	EN / हिन्दी / ગુજરાતી	Phase-2; content-first means planning string expansion NOW.
Footer	"Made with PrintVana · Get your card" + Privacy/Terms	The referral loop — every card sells the next card (all 3 references do this).

2.3 Features Beyond the Reference Image (research findings)

Found across Uniqode / Popl / OVOU / OmniFlow / dzicard but **not** in the EliteCard image:

1. **Two-way exchange (lead capture form)** — the single biggest gap; turns the card from a brochure into a lead engine.
2. **Wallet passes** (Apple/Google) — persistence after the tap.
3. **UPI payments block** — India-specific killer feature.
4. **Google Review deep link** — SMB local-SEO magnet.
5. **Appointment booking** — high value for consultants/doctors/agents.
6. **View analytics for owner** — views, taps by action, saves, lead count, tap locations.
7. **Email-signature embed & virtual meeting background** with card QR — passive sharing surfaces.
8. **SMS sharing + reverse QR** — works when receiver has no WhatsApp.
9. **Team features** — locked brand templates, central roster, bulk provisioning (Phase 2, B2B).
10. **CRM export** — leads → CSV/Google Sheets → later Zoho/HubSpot (Phase 2).
11. **View counter & "card sticker" download** (dzicard) — cheap social proof + offline QR sticker for shop counters.
12. **PrintVana-unique synergy:** Print this card — order physical NFC cards, QR stickers, standees, brochures **through the PrintVana marketplace**. No competitor can close this loop.

2.4 Module System (how IA flexes per persona)

The card = **fixed core + optional modules**, so a chai-stall owner and a consulting MD both look right:

- **Core (always):** Identity + Action Row + Share + Footer
- **Modules (owner toggles):** About · Offerings · Gallery · Video · Testimonials · Resources · Payments · Booking · Review link · Lead form · View counter

Empty modules never render. No "coming soon" placeholders — IxDF: content availability first.

Part 3 — UX Writing Guide (voice, labels, microcopy)

3.1 Voice & Tone

- **Warm-professional, Indian-English friendly.** Say "Enquire on WhatsApp", not "Initiate communication".
- **Verb-first CTAs** (IxDF action-oriented grammar): Save, Call, Share, Book, Pay, Enquire.
- **No jargon:** "vCard" → Save Contact . "VCF Card" (from reference image) is developer language — never show it.
- **Numbers over adjectives:** "PDF · 1.8 MB", "288 views" — not "comprehensive document".

3.2 Microcopy Table (canonical strings)

Context	✗ Avoid	✓ Use
Primary CTA	Download VCF / Add to contacts	Save Contact
Lead form open	Submit your information	Share your details
Lead form success	Form submitted successfully	Done! {Name} has your details.
Offerings title	Exclusive Offerings / Our Portfolio	What we offer
Enquiry CTA	Contact us for inquiry	Enquire on WhatsApp
Payments	Payment Information	Pay {FirstName} / Scan to pay
Wallet	Export pass	Add to Apple Wallet
Offline error	Network error occurred	You're offline. The card will load when you're back.
Broken action	—	This link isn't working. Try {alternative}.
Share sheet	Refer this card	Share {FirstName}'s card
Referral footer	Powered by PrintVana	Made with PrintVana · Get yours
QR screen	Scan QR Code	Point your camera here
Loading	Please wait...	Skeleton screens, no text (lxDF)

3.3 Content Rules for Owners (enforced in the editor)

- Tagline ≤ 60 chars · About ≤ 2 paragraphs $\times 3$ sentences · Tags ≤ 6 · Services: name ≤ 40 chars, description ≤ 90 chars.
- Editor shows **live mobile preview** — you write inside the constraint (content-first with real text, never lorem ipsum).
- Test data must include long names ("Chakravarthy Venkatasubramanian"), 2-line company names, Gujarati/Hindi strings (+30–40% expansion).

Part 4 — Mobile-First Flows

4.1 Receiver Flow (the tap — 95% of traffic)

NFC tap / QR scan / link

Flow rules

1. Save Contact reachable **without any scroll**, in the thumb zone.
2. Every action ≤ 1 tap to native app. No login, no app install, ever.
3. Scroll is **one-directional, single column** (lxDF).
4. Lead-form nudge is dismissible and never auto-opens over content.
5. Page weight target: < **200 KB first render**, < **3 s on 4G**.

4.2 Owner Flow (buy → build → share → track)

Discover (PrintVana app banner / referral footer / sales)

	① Photo & name → ② Contact actions → ③ Business info → ④ Extras
	Live phone-frame preview at every step
▼	
3. PREVIEW	"See it like they will" – full receiver view test
▼	
4. SHARE	• Order NFC card (→ PrintVana print marketplace!)
	• Download QR sticker / poster (→ print via PrintVana!)
	• Wallet pass • link • email signature
▼	
5. TRACK	Dashboard: Views • Saves • Action taps • Leads inbox
	Lead row → one tap: Call / WhatsApp / Export
▼	
6. UPDATE	Edit anytime → live instantly. "No reprints. Ever."

Owner-side rules

- Onboarding completable on a phone in **< 5 minutes** with only P0+P1 filled; every module skippable ("Add later").
- Progressive disclosure: extras (payments, booking, resources) live behind "Add more sections".
- Notification on new lead: WhatsApp/push — "Rahul from Ahmedabad shared their details on your card."

4.3 Screen Map (sitemap)

card.printvana.com/

└─ /{handle}	← RECEIVER card page (public, no auth)
└─ #qr	full-screen QR overlay
└─ /vcf	vCard download endpoint
└─ /pass	wallet pass endpoint
└─ /studio	← OWNER app (auth)
└─ /onboarding	(4 steps)
└─ /editor	(modules, live preview)
└─ /leads	(inbox, export)
└─ /analytics	(views, taps, saves)
└─ /share	(QR kit, signature, wallet)
└─ /order	(NFC card + print products → PrintVana)
└─ /	marketing / "Get your card"

Part 5 — Responsive Strategy (mobile → web)

Approach: Responsive, mobile-first, single URL (per research: adaptive = multiple layouts = maintenance + SEO cost; the card's single-column simplicity loses nothing in responsive reflow).

Breakpoint	Layout behavior
≤ 480 px (design origin)	Single column. Action row 4 icons + More. Offerings horizontal-scroll cards. Sticky Save Contact on scroll-up.
481–768 px (large phone/small tablet)	Same column, max-width 560 px centered. Offerings 2-up grid.
769–1024 px (tablet)	Card centered 640 px; gallery 3-up; nav actions get text labels beside icons.
≥ 1025 px (desktop)	Two-zone: left rail = identity + actions (sticky), right = content modules. Offerings 3-up. QR panel visible by default ("Scan to open on your phone").

Enhancement direction (never subtraction):

- Base (mobile) = complete experience: every fact, every action.
- Desktop *adds* comfort: persistent QR (hand-off principle — desktop viewer sends card to their phone), hover states on top of tap states, wider media.
- Owner editor: mobile = full editing; desktop = adds side-by-side preview + bulk tools.

Performance & resilience checklist

- ☐ P0 text renders before any image (progressive enhancement)
- ☐ Poster-only video embeds; lazy gallery
- ☐ vCard + core contact data work with JS disabled
- ☐ Offline revisit: cached card shell (PWA) — "on-the-move users, unstable networks" (lxDf)
- ☐ All tap targets ≥ 44 px; text ≥ 11 pt; portrait-first
- ☐ Heading order H1→H3 clean; alt text everywhere; ARIA on overflow menu (screen readers)
- ☐ Pseudo-localization pass (Hindi/Gujarati +40% string length)

Part 6 — What We Deliberately Leave Out (and why)

Rejected element	Reason
App install requirement	Kills the 10-second promise. Web only.
Login to view card	Same. Public page.
Autoplaying video/audio	Data cost + surprise = distrust (IxDF: kill bandwidth eaters).
Hover-dependent anything	Touch-first (IxDF: no hover on mobile).
Carousel hero banners	Attention span; one static/gradient banner.
Pop-up newsletter/ads	This is a person's card, not a funnel.
Long forms	2 required fields max, everywhere.
"VCF/vCard" jargon in UI	Receiver language, not developer language.

Appendix A — Reference Card Teardowns (research evidence)

qlik.biz/universalbrew (Gunjan Talsania) — view counter (288), name/company/role, Call-WhatsApp-Website chips, GSTIN, categorized product list (Coffee/Tea/Cocoa), address, 2 phones, email, social (LinkedIn/FB/Insta), vCard export, share via WA/email/FB/LI/X, "Create Your Digital Card" referral, powered-by. *Weakness: wall of text, no lead capture, no payments.*

qlik.biz/MehulGajjar (Kristal Graphitech) — same skeleton + Google Maps location chip; Instagram only; referral code in signup link (viral loop!). *Weakness: no imagery for a visual business (printing/signage).*

dzicard.com/dbc/kgb-boilers (Amit Gajjar) — Inquiry CTA, Share, Call/WhatsApp/Email/SMS, Save vCard, QR code, **Legal Info** (ISO cert), **Payments** section, products list, maps link, 6 socials incl. IndiaMART & YouTube, downloadable QR sticker, feedback link, referral CTA. *Strongest feature set of the three; weakness: dated visual design, typo'd email ("gmail.ccom") shows the need for input validation in our editor.*

EliteCard reference image — premium visual bar: cover art, avatar, tagline, 7 action chips, About + tags, QR panel, offerings with search + Enquire, media spotlight video, portfolio grid, resource PDFs with sizes, testimonial, clean footer. *Gaps we close: lead capture, payments, booking, wallet, review link, analytics.*

Appendix B — Field Validation Rules (editor)

Field	Validation
Phone	E.164, India default +91, live format check
Email	RFC + typo suggestions ("gmail.ccom → gmail.com?")
UPI ID	<code>name@bank</code> pattern check
GSTIN	15-char checksum validation
Handle	3–30 chars, lowercase, unique, no impersonation of brands
Images	Auto-compress to WebP, face-crop suggestion for avatar
Links	HTTPS enforced, dead-link checker weekly

Companion document: `mobile-first-design-research.md` (IxDF principles this IA implements). Next phase: wireframes → PrintEve Design System tokens → hi-fi mobile screens.
